

Conférence organisée par l'Axe "Justice Spatiale" du LAVUE et le Réseau d'études et d'échanges en Sciences Sociales sur l'Eau

## Why Rhetoric and Communication Matter for Environmental Management

Présentation de **Caroline Gottschalk Druschke** (Department of English / Nelson Institute for Environmental Studies, University of Wisconsin-Madison)

Working through ethnographic, archival, biological, and media research in Rhode Island and Wisconsin USA, Dr. Druschke fuses perspectives from rhetorical studies, geography, and science & technology studies to engage with river restoration projects past and present. Here she presents a series of debates about dam construction and removal across locations, scales, and intended species, considering how perspectives on language and on the nature of language can offer productive directions for both multispecies theory and river restoration practice.

## Lundi 19 Mars 2018, à 10h

Salle des Conférences, Bâtiment Max Weber (RDC) • Université Paris Nanterre
